

企业简介

Company profile

镇江中船现代发电设备有限公司 (CMXD) 成立于2005年，隶属于中国船舶工业集团公司 (CSSC) ，是集发电机研发、制造及发电机组成套为一体的现代化企业。公司主要产品包括低压发电机、中高压发电机、高速柴油发电机组等，同时也具备研发和制造轴带发电机、汽轮发电机的能力。其产品广泛应用于船舶、海洋工程、电站，同时也广泛应用于核电、陆用电站、楼宇、医院等领域。

Zhenjiang China Marine-XianDai Generating Co., Ltd.(CMXD), founded in 2005, subordinated to China State Shipbuilding Corporation (CSSC), is a high-tech company specializing in producing, researching and developing generators and diesel gensets. Main products are low voltage generators, middle and high voltage generators, high speed gensets and so on. CMXD also has the ability to research and develop & produce shaft generator and steam-turbine generator. Our products are widely used on ship, marine engineering, power station and nuclear power plant, land power station, building, hospital and other industrial applications.

在现有韩国现代三相无刷同步发电机许可证技术的基础上，公司于2016年成功引进了德国西门子子公司1DB系列三相无刷同步高低压发电机许可证技术，实现共线生产，以满足客户的不同需求。公司将秉承西门子发电机全球领先的技术基础，结合公司现有的发电机生产线和测试系统，持续为客户提供安全可靠、性能稳定、品质优异的发电机产品，满足客户的不同应用环境和工况要求。

Based on the Korea HYUNDAI three-phase brushless synchronous generator license, CMXD introduced 1DB series three-phase brushless synchronous generator technology from SIEMENS in 2016. And now CMXD can produce the generators using above two technologies to meet the different requirements from customers. CMXD will follow the world's leading technology of SIEMENS generator, combined with our existing production line and test system, continues to provide safe, reliable, stable performance and high quality generators to customers, and can satisfy different environment and working conditions.

CMS系列发电机介绍

CMS series generator profile

概况

General description

CMS系列发电机是基于西门子1DB许可证技术生产的。西门子同步发电机已在全世界普遍使用。所有低压和高压发电机结构紧凑、性能卓越、应用范围宽广。西门子发电机有宽广的型谱范围，能为客户提供适应特殊场合应用的最佳解决方案。精益求精的设计符合DIN-EN 60034、VDE 0530、IEC 34-1等国际标准以及ABS、BV、CCS、DNV- GL、LRS等船级社规范。西门子发电机既能用柴油机、气体机、多燃料内燃机驱动，也可用水轮机、汽轮机驱动。西门子发电机以运行可靠著称，即使在严酷的环境下。

CMS generators are produced based on the SIEMENS 1DB license. Synchronous generators from SIEMENS have been used all over the world. Low and high voltage synchronous generators are robust and compact products in wide applications. The variety of types enables our customers to find the most suitable solution for their particular applications. Our generators are deliberately designed in order to meet various international standards such as DIN-EN 60034, VDE 0530, IEC 34-1 as well as special regulations for classification of the ships and offshore installations, for example, ABS, BV, CCS, DNV- GL, LRS and so on. SIEMENS generators can be driven by combustion engines, gas engines, multi-fuel engines and water turbines, steam turbines as well. SIEMENS generators are always reliable even under severe conditions.

CMS发电机拥有一个宽广的产品系列型谱，其功率和转速范围允许客户选择最合适的发电机作为最佳的选择。根据许可证协议，中船现代和西门子可以根据客户需要对指定电压和极数进行联合延伸设计，属于许可证协议范围内。结构支撑（机座、轴承座）为焊接件，适应不同的连接尺寸。主转子为隐极设计，采用无刷励磁方式，通过旋转整流器为转子绕组提供励磁电流。标准AVR（自动电压调节器）配置于发电机内的辅助出线盒内，由安装在定子槽内的辅助绕组供电。定子绕组具有电气强度和机械强度高、环境适应能力强的特点，绝缘等级为F级或H级。发电机通常都安装温度传感器来控制和保护重要部件。

CMS generators have a wide manufacturing spectrum. The wide range of the power and speed allows customers to choose the most appropriate generator. According to the license agreement, CMXD and SIEMENS can joint and extend the design of the generator with specify voltage and poles upon to customer requirement, fall within the scope of the license agreement. Supporting structure (frame, bearing shields) is welded and allows a broad variability of connection dimensions. Main rotor is based on cylindrical design and is supplied from a rotating exciter. Rotor winding is supplied through a rotating rectifier. Standard location of an automatic electronic voltage regulator (AVR) is in auxiliary terminal box mounted on generator. AVR is supplied from an auxiliary winding installed in stator slots. Stator winding is characterized by a high electrical, mechanical and climatic resistance. The stator winding is manufactured according to insulation class F or class H. Generators are conventionally equipped with temperature sensors in order to control the functions of all important parts of machines.

基本参数

Basic parameters

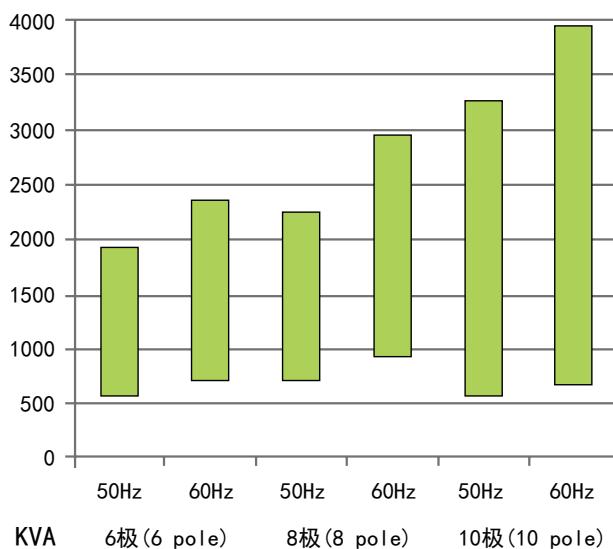

型号/Type	CMS系列/CMS series
输出容量/Power output	600 – 4000 kVA
极数/Pole number	6P – 10P
电压范围/Voltage	0.4 kV – 11 kV
安装形式/Mounting form	IM1001, IM1101, IM1305
轴中心高度/Height of axis	450 mm – 710 mm
效率/Efficiency	93%– 97%
防护等级/Protection	IP23, IP44, IP54
绝缘等级/Insulation class	标准/Standard: 155°C (F); 可选/ Option: 180°C (H)
冷却方式/Cooling	IC01 (空冷/air cooling), IC81W(水冷/water cooling)
转子类型/Rotor	隐极/cylindrical rotor

功率范围

Power range

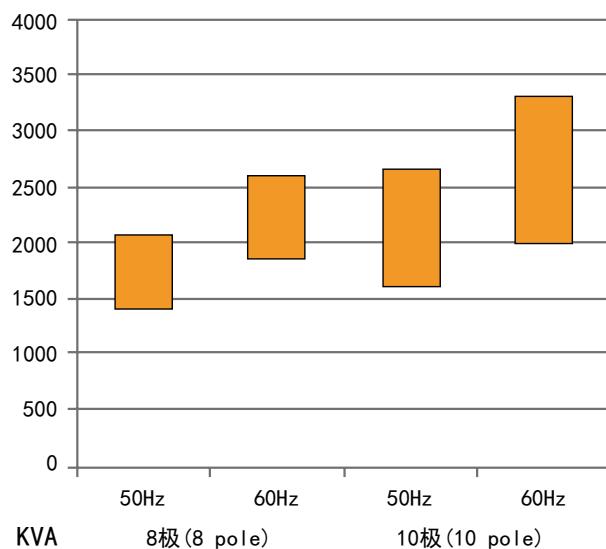

低压型电压范围 (400 – 690V)

Low voltage (400 – 690V)

高压型电压范围 (6300 – 6600V)

High voltage (6300 – 6600V)

设计说明

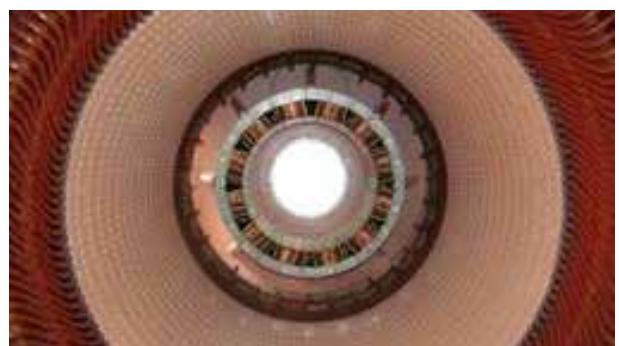

Design

定子

Stator

定子铁芯，采用分段结构，由高性能硅钢叠片构成，硅钢片表面涂有绝缘漆膜，经过轴向冲片叠压和扣片固定后焊接在一起，最后压入结构牢固的焊接机座内。三相绕组和提供励磁电流用的辅助绕组镶嵌在定子铁芯槽内。因卓越的绕组绝缘结构，发电机也适合安装在极端潮湿的地方。

The stator core is built into a rugged welded housing; it is axially compressed and held together by clamping elements on the back of the core. The stator core consists of high-grade electric sheet steel laminations, insulated from each other by a varnish coat. Stator cores are constructed in segments and welded together. The three - phase winding and auxiliary winding for supplying the excitation current are accommodated in the slots of the stator core. Thanks to the excellent winding insulation, the generators are also suitable for installation in areas with extremely high humidity.

过载

Overload

电机的鲁棒性设计允许一定的电气过载负荷。发电机定子能够承受150%额定电流持续2分钟不会给绕组带来任何损害。

Robust design of machines allows a certain electrical overload. Without any damage to winding, generators can be overloaded by stator current up to 150% of nominal current value up to 2 minutes.

短路持续电流

Constant short-circuit current

为保护装置功能正常，发电机能提供一个短路电流，其值是额定电流的3倍。这个电流至少能持续3秒后必须由保护系统断开。

To ensure a correct function of protection devices, generator is able to supply a short-circuit current, the value of which is triple of nominal current. This current must be disconnected by the means of a protective system within 3 seconds at the latest.

结构（设计）类型

Design types

根据客户的要求进行IM1101 (B20)、IM1001(B3)、IM1305(B16)以及其它结构形式设计（含盘片形式），可制造成单轴承和双轴承两种类型。轴伸高度和连接尺寸可在设计允许范围内调整。

Generators CMS are manufactured as two-bearing or single-bearing types, designed according to IM1101 (B20)、IM1001(B3)、IM1305(B16), respectively other designs (including disc) requested by customers. Axial height and connection dimensions are variable in range of design possibilities.

轴承

Bearings

发电机既可选装可加注更换润滑脂的滚动轴承，也可选常规滑动轴承、绝缘轴承及其附件。

Generators can be equipped either with rolled bearings, which include the possibility of re-lubrication and removing of waste grease or with sleeve bearings or insulated bearing including their accessories.

防护等级与冷却

Protection degree and cooling

CMS发电机的基本型是依据IP44 (IP54) 和IP23进行设计。防护等级为IP23时，采用IC01空气冷却方式。如果防护等级为IP44 (54)，采用IC81W水冷却方式，冷却单元需置于电机上部。对于船用IP44 (54) 水冷发电机，应急模式 (IP21) 为可选。如果有环境条件要求，发电机开放式空气冷却可以增加空气过滤器。

Basic types of generators are designed according to IP44 (IP54) and IP23. CMS generators can be delivered with IC01 cooling using the surrounding air from the local environment with protection IP23. In case of water cooling (IC81W) with protection degree IP44 (54) the cooling elements are located on top of the machine. For ship-operated water-cooled generator, emergency mode (IP21) is optionally provided. If the ambient conditions require it, generators using open-circuit air cooling can be fitted with air-intake filters.

出线盒

Terminal boxes

高压主绕组连接线和用于调节和保护装置的连接线相互独立的。出线盒根据客户要求制造。

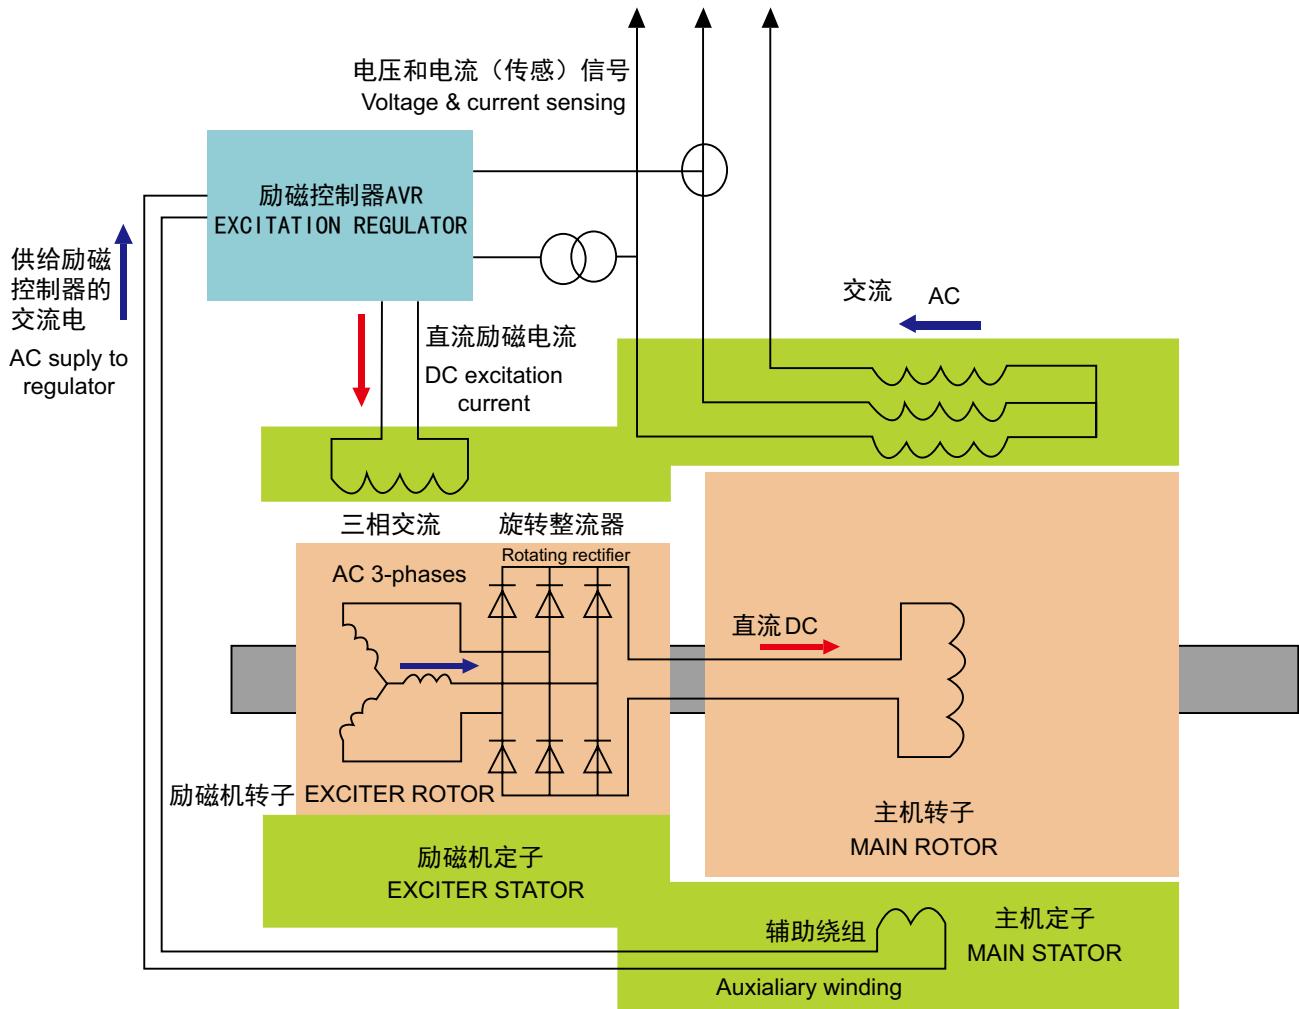

Connection of main high-voltage winding and connections used for regulation and protection devices are always separated from each other. The terminals are manufactured according to customer's request.

励磁系统

Excitation system

无刷自励系统是西门子发电机的标准配置。励磁系统由辅助绕组、AVR、用于电流和电压信号的CTs和VTs、内置励磁机和旋转整流器组成。特别是配置了用于自动电压调节的数字AVR，能更好地应对发电机并车运行时的电压跌落。

Generators are equipped with a brushless self-excitation system as standard. The excitation system consists of the auxiliary windings, automatic voltage regulator (AVR), CTs and VTs for the current and voltage sensing, built-in exciter and the rotating rectifier. Typically, generators are equipped with a digital AVR for automatic voltage regulation with voltage drip function for parallel operation.

降功率系数

De-rating factors

海拔高度

Altitude

额定功率是指发电机安装在海拔1000米以下，如果超过这个高度，需按下面给出的降额系数使用。

The rated power outputs refer to installation up to 1000 masl. Above this level the following de-rating factors have to be applied.

高度 (海拔/米) Altitude (masl)	1000	2000	3000	4000
降额系数 De-rating factor	1	0.96	0.93	0.88

功率因数

Power factor

发电机额定功率因数为0.8。根据不同的功率因数，对应的降额系数如下：

The nominal power factor is 0.8. For different p.f. values following de-rating factors have to be applied.

功率因数 Power factor	0.8	0.7	0.6	0.5	0.4	0.0
降额系数 De-rating factor	1	0.95	0.92	0.88	0.86	0.82

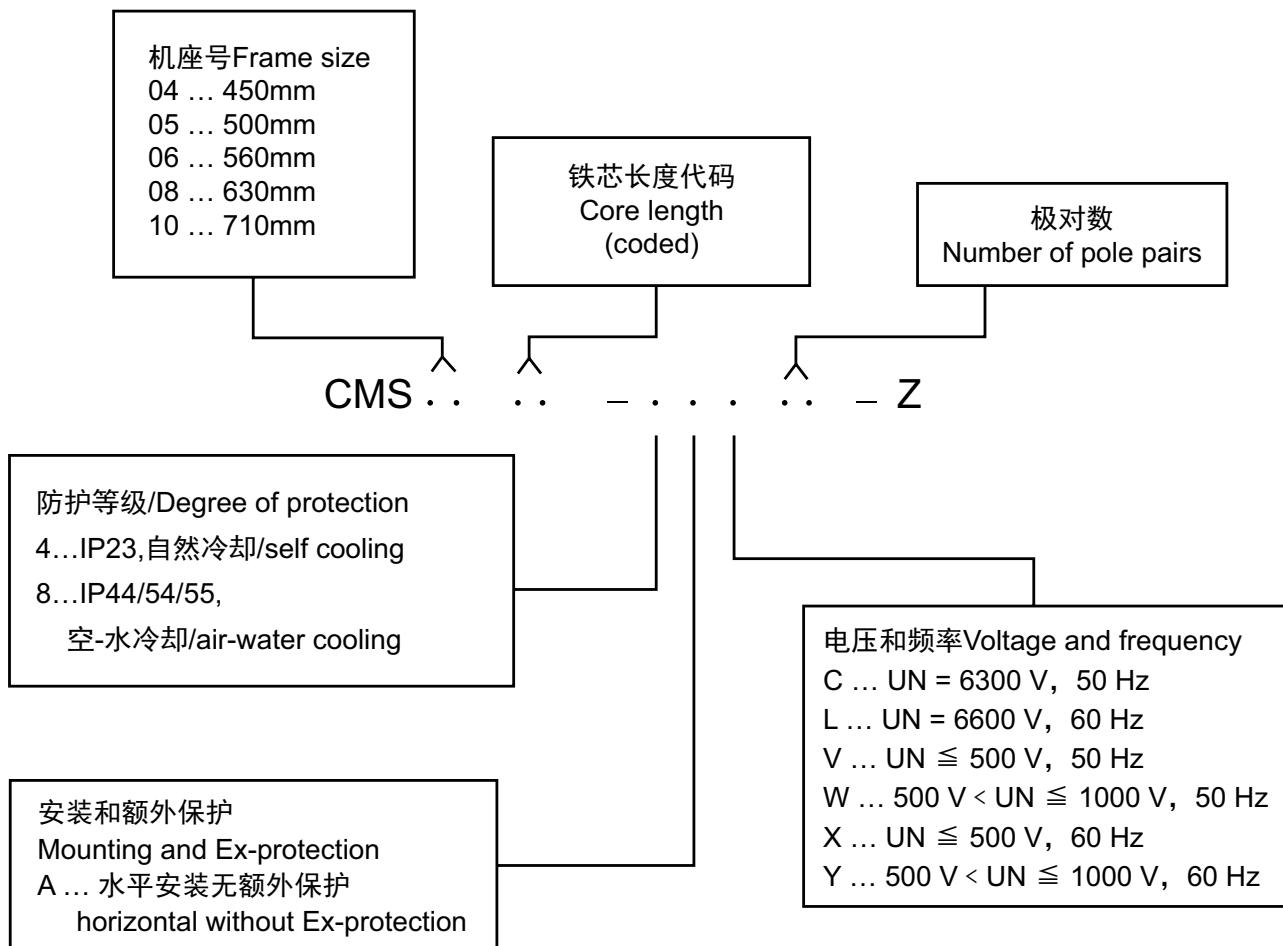

电压等级与极数

Available Voltage levels

型号/Type	6极 (6p)	8极 (8p)	10极 (10p)
